This guide will show you in 5 minutes some of the main functionalities of the platform such as charting, toolbars and placing orders. NanoTrader Free offers much more functionalities than those presented in this guide. Some key concepts require your attention. These concepts are identified by the following icon

This simple startpage consists of six building blocks. Each block is discussed in the guide.

The quoteboard contains your selection of tradeable instruments. It can be used as a starting point for some of the major functionalities.

A screenshot of the selfinvest software interface. On the left, there is a table titled "Most Popular Symbols - Scanner (LiveTable)" with columns for Name, Bid, Ask, and YChg. A context menu is open over the "Germany 30 cash, EUR" row. The menu items include: Buy, Sell, Add Symbols ..., Remove Symbol, Remove All Symbols, Template Studies, Studies of this Symbol, Configure Columns ..., Select Font ..., Save ..., Save As ..., Delete, and Dockable to other windows. The "Delete" option is highlighted with a blue arrow pointing to it from the text below. The background shows a workspace with other windows and icons.

Right-click in the quoteboard opens the context menu.

You can make and save numerous quoteboards. One workspace (layout) can contain several quoteboards.

Remember to save your changes under a name of your choice.

Changing a chart ...

If the chart is linked to the quoteboard: click the instrument in your quoteboard.

If the chart is not linked to the quoteboard: drag the instrument onto the chart.

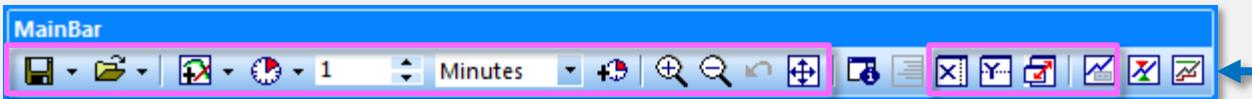

You can select every setting possible for the charts and combine them with all possible technical analysis indicators. Once you have made a chart which you like, you can save it either as a „Study“ or as a „Template Study“.

A study is for a specific instrument. A template study is for all instruments in the platform. Using a template study you can immediately open a similar chart for every tradeable instrument in the platform.

Remember to save any chart you like under a name of your choice.

Setting chart parameters and adding technical analysis is done via the toolbars.

Save your template
Open an existing template
Add an indicator
Set timeframe
Load more historical data
Zoom out and in

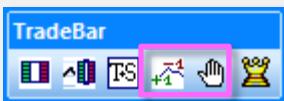

Maximum enlarge chart
X and Y axes are visible
Detach chart from main window
Labels visible in chart

Drawing tools.

Select chart type: line, bar, candle, Heikin Ashi.

Order fills visible in chart. One-click orders.

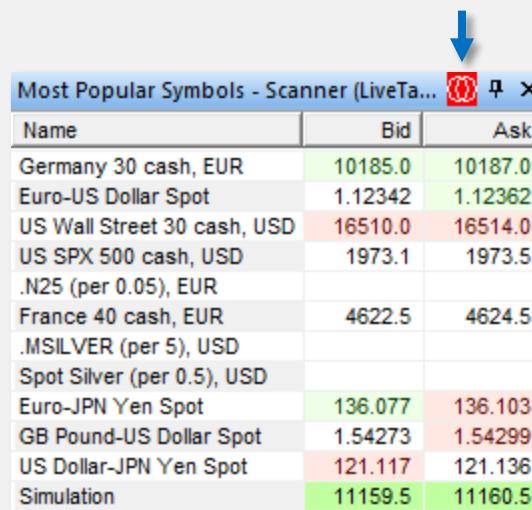

The toolbars can be included in the every chart or they can be shown once at the top of the platform. By showing them once only at the top of the platform you save a lot of space in your charts. This can be set in Extras - Options.

Linking Charts

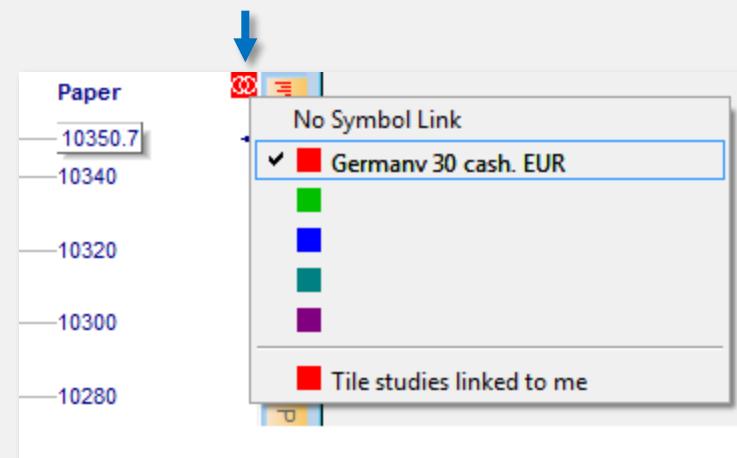

Charts can be linked to one another and to a quoteboard.

In the chart select the same colour as the colour code of the quoteboard. Click any instrument in the quoteboard and the linked chart will show the instrument.

Linking charts to one another is also done by selecting the same colour code in each chart.

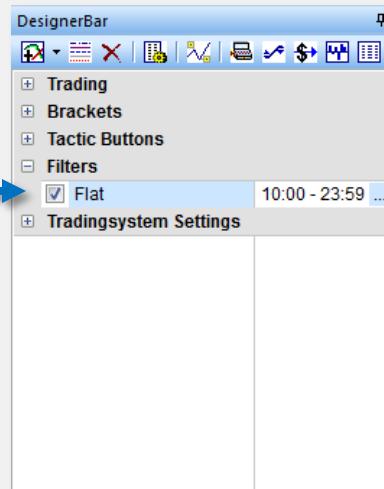

Name	Bid	Ask
Germany 30 cash, EUR	10185.0	10187.0
Euro-US Dollar Spot	1.12342	1.12362
US Wall Street 30 cash, USD	16510.0	16514.0
US SPX 500 cash, USD	1973.1	1973.5
.N25 (per 0.05), EUR		
France 40 cash, EUR	4622.5	4624.5
.MSILVER (per 5), USD		
Spot Silver (per 0.5), USD		
Euro-JPN Yen Spot	136.077	136.103

US Dollar-JPN Yen Spot	121.117	121.136
Simulation	11159.5	11160.5

The flat filter can be used to automatically close an open position at a specific point in time.

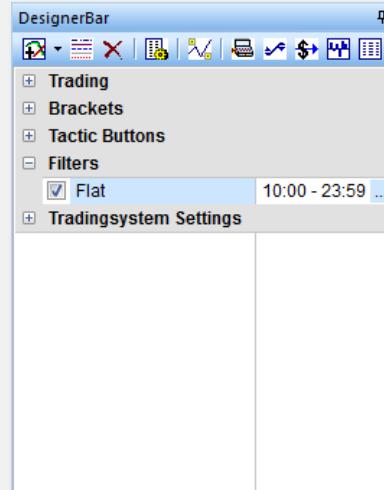

1. Click this icon and add the flat filter. It is possible to add more than one flat filter.

2. Configure the filter. At the start of the period and during the period you indicate, an open position will be closed automatically. This trader wishes to close at 10h00 the position he bought earlier at 9h40.

3. Activate TradeGuard with a left-mouseclick.

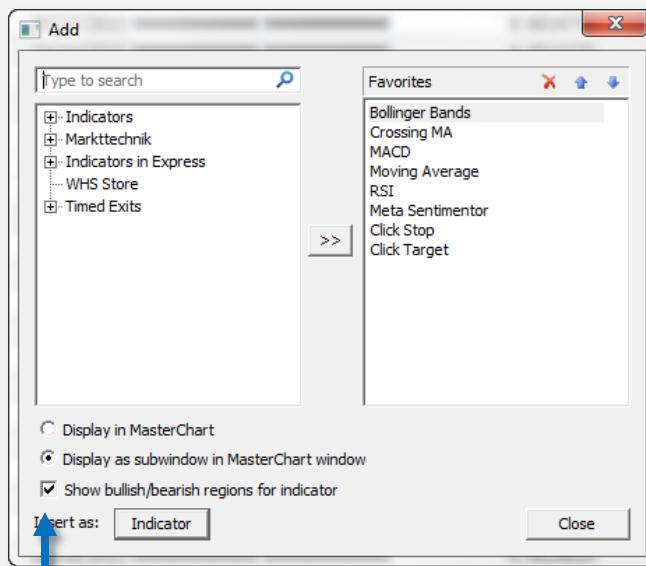

The position was closed automatically at 10h00.

Adding and Interpreting Indicators

The (combined) opinion of indicators is reflected in the background of the charts.

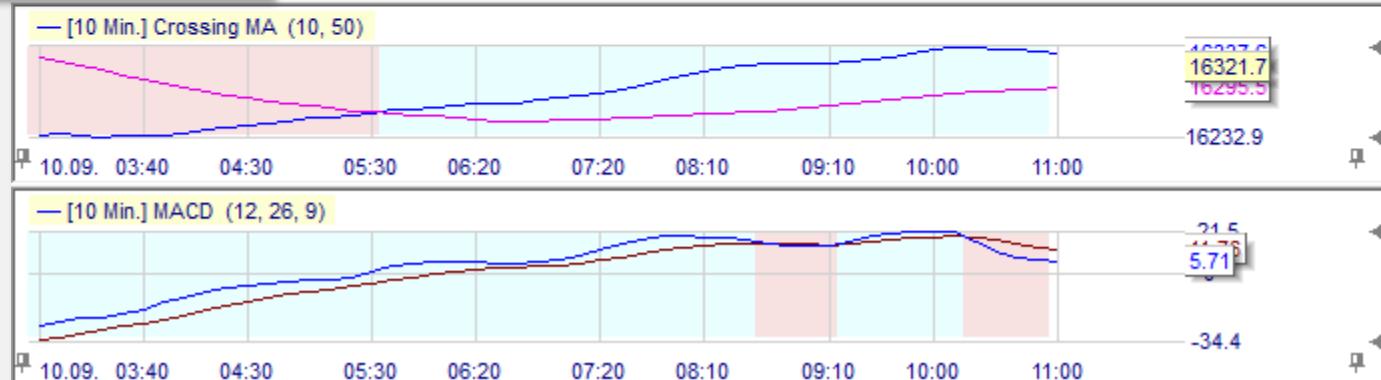

1. Click this icon and add one or more indicators.

2. Select if you wish to see the indicator in or below your masterchart.

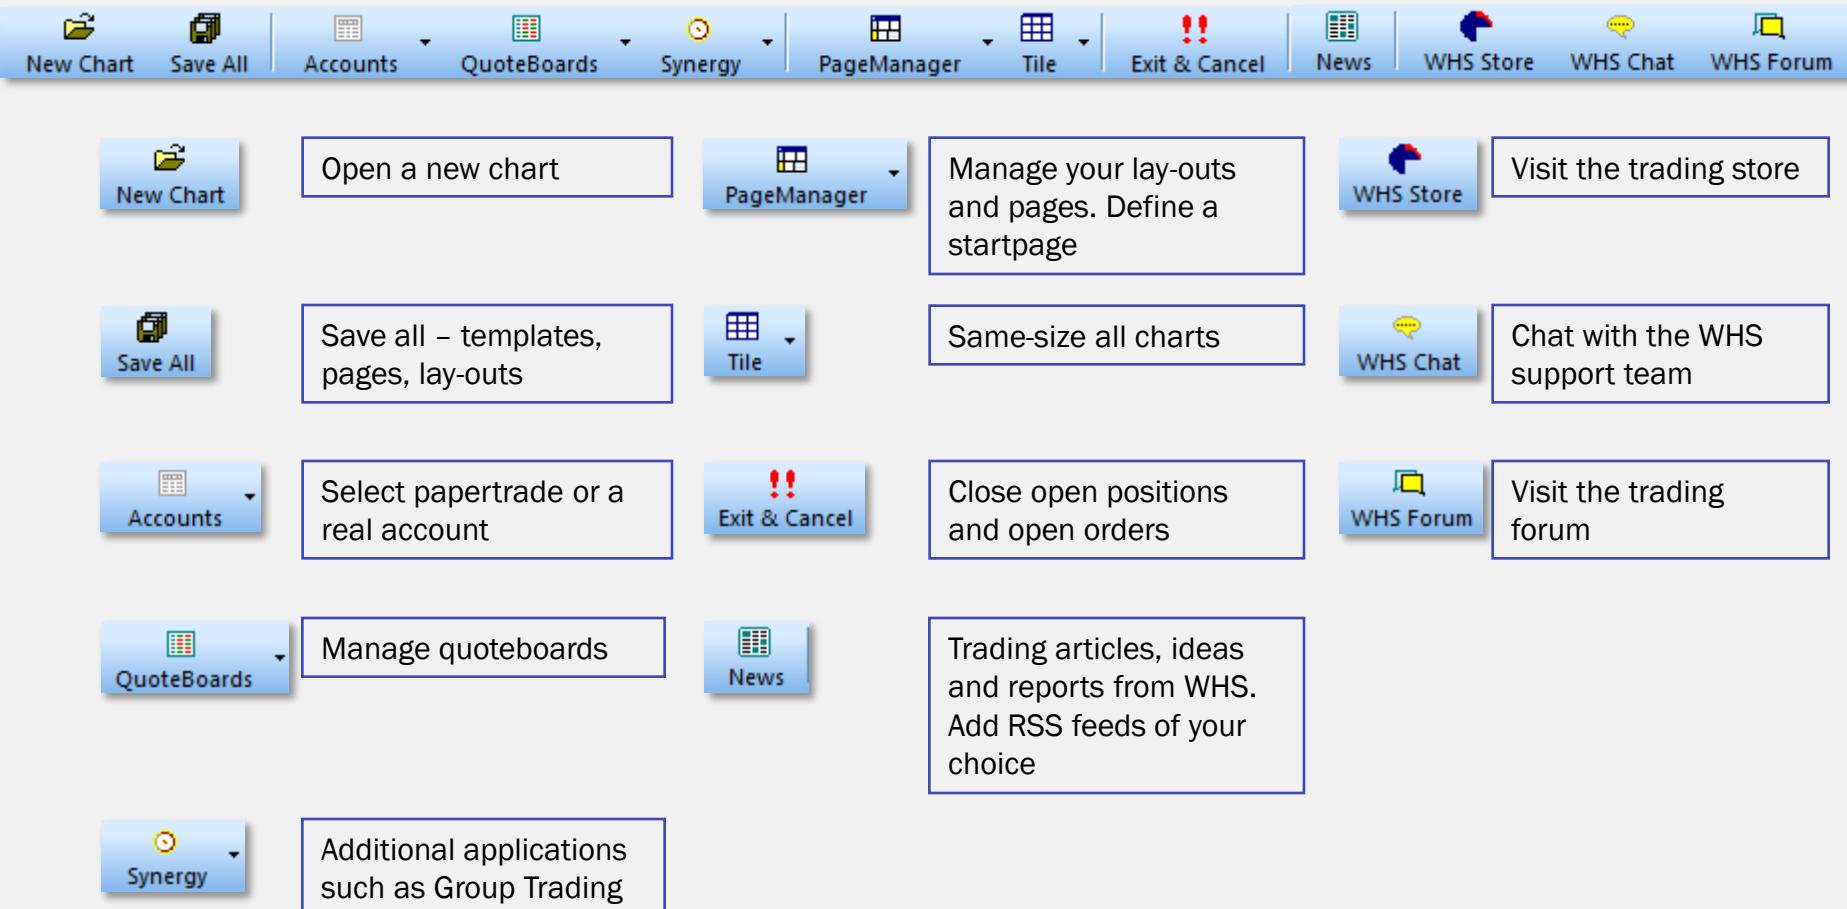

3. Select if you wish the opinion (bullish or bearish) of an indicator to colour the background of the charts.

This trader added two indicator below his masterchart. Each indicator has its own bullish or bearish opinion which is shown by the background colour. The masterchart reflects the combined opinion of both indicators. This is unique!

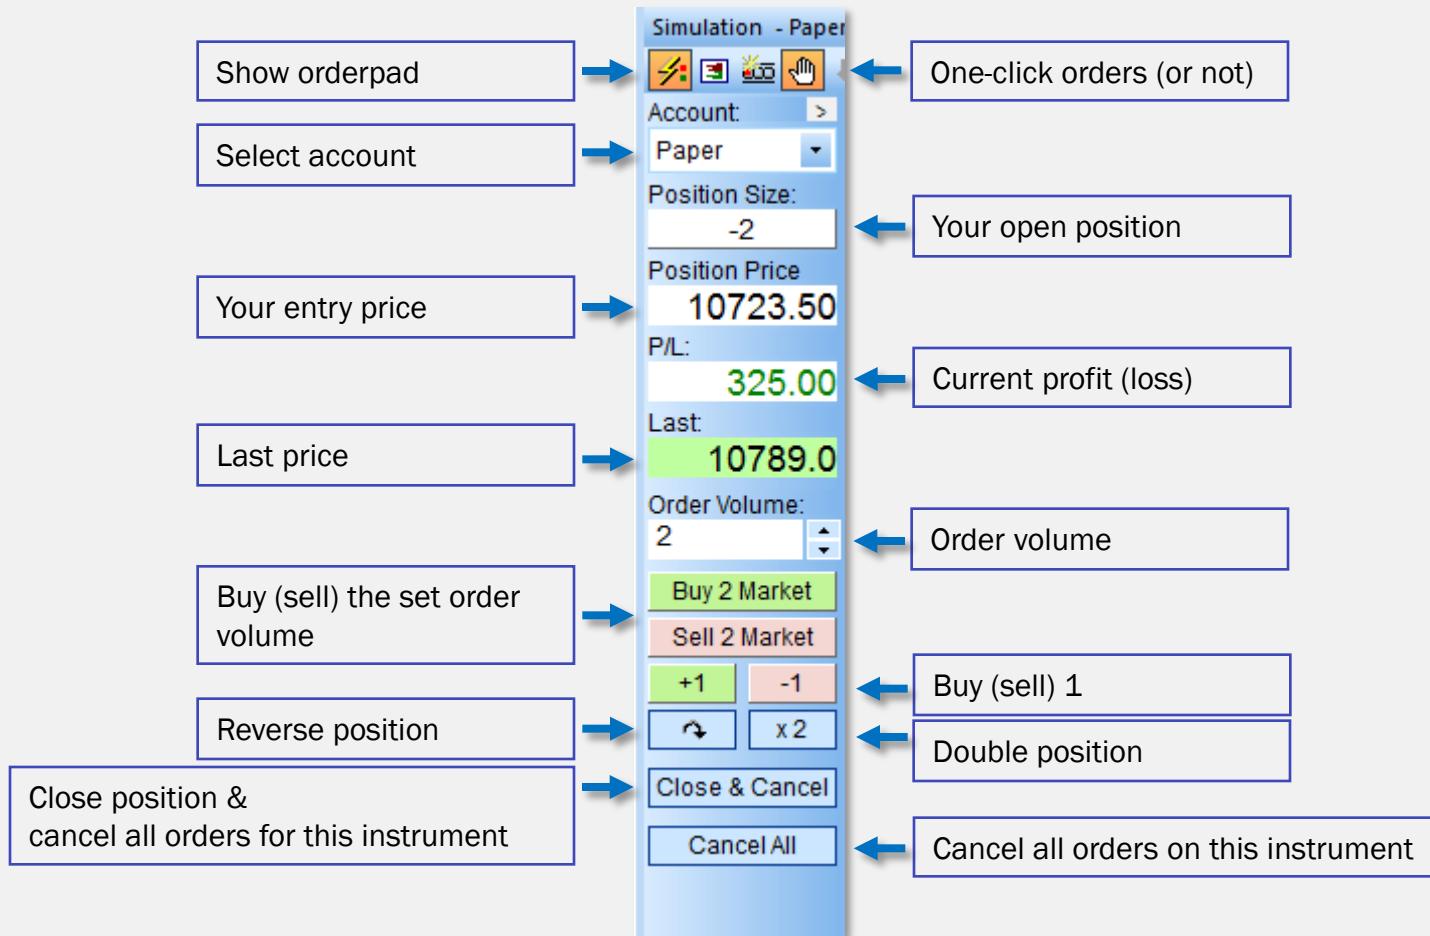

Main ToolBar

Via the Main ToolBar some important functionalities are activated and/or managed.

The orderpad in each chart gives a summary overview and allows several one-click orders and instructions.

A classic orderticket appears when you click the buy or sell button in the chart. You can, when placing your order, add a stop and a target order. These will be placed automatically once your position is open.

Create Order - 4789794

.F40.cfd

France 40 cash, EUR

Volume: 1 OCO Entry

Type: Market

Price: 4642.8

Ask (Buy): 4642.8 Day

Bid (Sell): 4641.8

Margin: 92.84 EUR

Buy **Abort**

Add Contingent Orders

Contingent Orders work as OCO

Limit 2.9% RRR = 1.8

Stop 1.6%

Save **Percent**

In this example the target is set to +2,9% and the stop to -1,6%. This results in a return/risico ratio of 1,8.

Click the red arrow in front of the future orders in the chart and drag them to a stop and target of your choice.

Once an order has been placed, you can click the orderlabel to see the Tactic buttons. In one-click you can change the price level or you can change the ordertype.

10 Different Stop Order Types

10 different stop order types are available via the blue Tactic buttons. You can select those you wish to see and configure their settings.

Stop Order on Trendline

You can place a stop order on your trendline. The stop will automatically follow the trendline.

1. Draw your trendline and select Long-Stop and Short-Stop.

2. Activate TradeGuard with a left-mouseclick

Once you open a position the stop will automatically place itself on your trendline and will then follow it

The account window shows the account status, the open positions, the open orders and the executed orders. The account window can also function as a quoteboard.

It is possible to have the papertrade account and one or more real accounts open at the same time.

The screenshot shows the WH selfinvest account window interface. At the top, there's a toolbar with various icons. Below it is a table showing a single position for 'France 40 cas...'. The table includes columns for Name, Sy..., B..., Sell, Exit, Position, Position P..., Last, P/L (EUR), Study: ..., Underlyi..., Bid, Ask, Margin, and Spread. The 'Buy' button is highlighted in green. Below the table, the account status is displayed: BPow.: EUR 49,899.35, P/L: -10.30, Equity: 49,992.00, Margin: 92.65 (53957.91%). A blue arrow points from a callout box to this status area. At the bottom, there are three tabs: 'Positions' (selected), 'Working Orders', and 'Completed Orders'. A blue arrow points from another callout box to the 'Positions' tab. A third callout box contains text about the order tabs.

Name	Sy...	B...	Sell	Exit	Position	Position P...	Last	P/L (EUR)	Study: ...	Underlyi...	Bid	Ask	Margin	Spread

Positions Working Orders Completed Orders

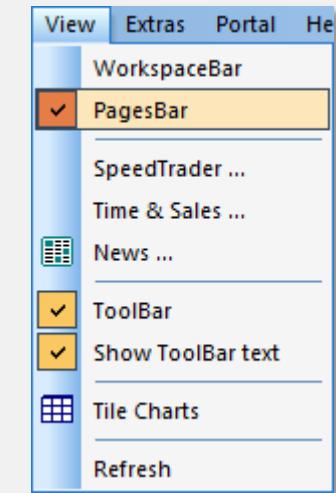

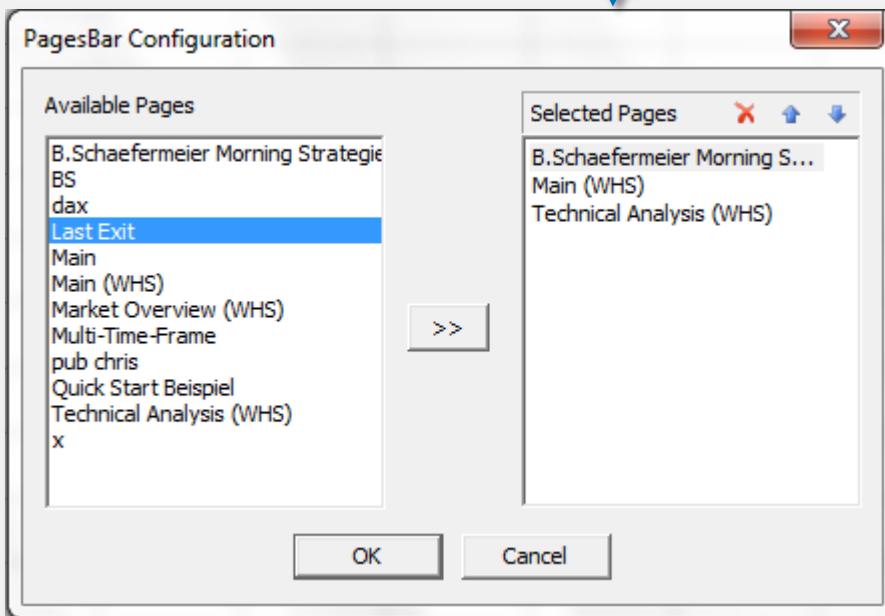

Use these tabs to see all open orders and to see all executed orders.

Buying power, profit/loss, equity, margin required, margin percentage.

The PagesBar at the bottom of the platform allows you to make several workspaces and keep them updated simultaneously. By using the buttons you can cycle through your workspaces.

Click 'Configure' to add or to remove workspaces from your layout.

You do not want the PagesBar at the bottom of your platform? Click View and untick PagesBar.

The platform contains 3 strategies as examples. They will show a signal but not place an order. Automated trading is not available via the NanoTrader Free. Automated and semi-automated trading IS available via the NanoTrader Full. NanoTrader Full contains over 45 trading strategies often designed by famous traders.
